

Position overview:

Mount Street are seeking a senior developer to work with their highly experienced debt management team focusing on building a disruptive new technology product. By leveraging technology, Mount Street helps owners, investors and traders of debt to manage their portfolios. Managing a portfolio of more than \$80 billion, Mount Street delivers a unique breadth and depth of expertise to a diverse array of institutional clients underpinned by our in-house technology.

In this role, you will be part of Mount Street's global technology team with a focus on Developing CreditHub. You will be responsible for building and maintaining components and service and ensuring that your code is designed, built, and tested to a high standard. You need to be able to work independently and take ownership of delivering solutions. You will need to meet tight deadlines and collaborate effectively with a global team.

There are excellent opportunities for growth and progression with this role and you will be working with a team that relishes challenges, creativity and using interesting new technologies.
